

Jungle Bay Eco Villas

Morne Acouma, Dominica

OBMI was trusted to create an eco-friendly hotel master plan and architectural design that would retain the original Jungle Bay property's unique character and connection to nature while infusing bespoke luxury with its eco-chic styling. OBMI aided site selection searching for an elevated location that would place guests in harmony with the natural environment. The new resort site sits on a plateau overlooking Soufriere Bay. The rebranded Eco Villas feature 120 villas, spa and wellness areas, yoga pavilions, a health food restaurant and a dedicated garden space. The architecture features local stone to blend the villas into the environment and provides a natural yet secure structure. The villas are decidedly more luxurious than the earlier incarnation of Jungle Bay, though the commitment to sustainability will remain the same. The property is planned to be 100 percent sustainable.
